Homework 3

In this assignment, you will be manipulating variables. Follow the steps below.

1. Declare and initialize a variable with type of your choosing. Set its initial value to 3.
2. In separate lines of code, add 4, multiply by 3, and divide by 2. Ensure that your final answer is mathematically correct.
3. Print out ONLY your final answer by referencing the variable name.
4. Recreate the "Hello World" Program, but you are required to use a String variable when printing.
